HOW TO DETERMINE THE GALLONS OF WATER ACCUMULATED PER 8 HOURS OF USE

Follow the steps below to determine the gallons of water accumulated by a compressed air system per 8 hours of use:

1. Determine the ambient temperature (outside temperature surrounding the dryer) and relative humidity.
2. Locate ambient temperature in first column of water factor chart.
3. Follow the row over to percent of humidity. This indicates the number of gallons accumulated by your air compressor in an 8-hour period.
4. Select the SCFM requirement for your dryer based on the SCFM coming out the air compressor
5. Once the correct HP rating has been selected based on the air volume requirements, you will need to know the type of available electric service to determine the need for a single phase or three phase compressor.

WHAT IS TORQUE?

Torque is the measurement of twisting force that is applied to a lug nut to create bolt tension.

WHAT IS CLAMPING FORCE?

Clamping force is the result of bolt tension and it is the physical property that holds the wheels on the vehicle.

DOES THE CORRECT TORQUE GUARANTEE THE CORRECT CLAMPING FORCE?

No. Clamping force cannot be measured in the field, so technicians must use the correct torque to approximate the amount of clamping force.

Since there are a number of factors that determine how much clamping force is generated per foot pound of torque, technicians should always **follow the RIST procedure** developed by the Tire Industry Association (TIA).

R stands for **remove** debris from mating surfaces

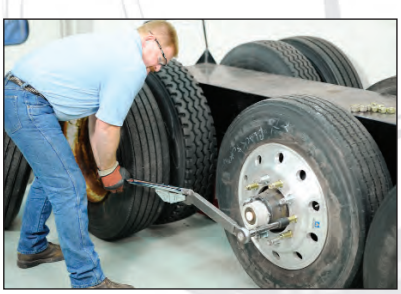

I stands for **inspect** all of the components

S stands for **snug** the lug nuts in a star pattern

T stands for **torque** the fasteners to specification

TORQUE SPECIFICATIONS

Hub-Pilot Wheel: 450-500 ft/lbs. oiled | Stud-Pilot Wheel: 450-500 ft/lbs. dry | Demountable Rim: 200-260 ft/lbs. dry

TIA is the industry leader in commercial truck tire and wheel service education. Since Occupational Safety and Health Administration (OSHA) Regulation 29 CFR 1910.177 requires training for all employees that service truck tires, fleets must make sure that every technician who installs, removes or handles truck tires in any way has compliant training. TIA developed the Fleet Tire Service OSHA Compliance Program so the trucking industry could provide in-house technician training that exceeds the minimum requirements established by 29 CFR 1910.177.

For more information on TIA training or the RIST procedure, visit TIA's website: http://www.tireindustry.org/training.asp or call 800-876-8376, ext. 106.

WHEEL SERVICE PRODUCTS
WHEEL CENTERING PRODUCTS

WHEEL CENTERING PRODUCTS FOR HUB PILOTED WHEELS

1. Increases fuel mileage
2. Increases tire life
3. Decreases tire vibration
4. Cuts rebalancing costs
5. Reduces "wheel-off" condition
6. Reduces tire cupping

Wheel Vibrations? Wheel Hop? Brake Pedal Pulsations? Erratic Tire Wear? Excessive Fuel Consumption?

If you are experiencing these problems, it may be because your wheels aren't centered on the hub. And if your wheels aren't centered, you will continue to experience these problems. With Specialty Products' Wheel Centering Products, you can re-center your wheel, and eliminate all of these problems.

How it works

If your hub piloted wheel is sitting on the hub stud off-center (as shown in the illustration) you need these parts and tools to avoid wheel hop and excess tire wear, and to increase your fuel mileage. The theory behind the hub pilot is it centers the wheel. The fact is gravity causes the weight of the wheel to rest only on the upper pilots creating a gap in the bottom pilots. Even the smallest gap results in an egg shaped motion upon rotation. This uneven motion creates rolling resistance which causes tire vibration, increased fuel consumption and erratic tire wear. The bottom line is, you can't balance an egg.

"EZ ON" WHEEL CENTERING TOOL SET

Simply slide the 3 centering tapered tools over the wheel studs at the 12, 8, and 4 o'clock positions; mount wheel and add lugnuts; remove the tools and replace remaining lugnuts, torquing to manufacturer specifications. The wheel is now completely centered. Problem Solved!

• Threadless Design • Saves Installation Time • Tapered Nose • Eases Wheel Mounting • Single Set • APPLICATION: For Steer, Drive & Trailer Axles

Our new threadless design allows the installer to quickly and easily center the wheels to the hub. And our tapered design makes it easy to mount the wheel over the hub.

RETRO-PRO BLE RETROFIT KIT

This brand-new app-based solution uses our innovative BLE (Bluetooth Low Energy) sensors to provide the ultimate retrofit solution for tire pressure monitoring on trailers, RVs, and non-TPMS-enabled passenger vehicles and light trucks.

The Retro-Pro BLE provides real-time tire pressure and temperature data to keep you informed about the status of your tires, with audio alerts and visual notifications sent directly to your smartphone if any problems arise, so you can take immediate action to detect leaks and prevent tire blowouts.

Offering superfast sensor configuration without the need for TPMS diagnostic tool, sensor setup and configuration is managed through the dedicated, free app available from the AppStore or Google Play, by simply scanning the QR code on the Retro-Pro BLE sensor for each wheel.

Available with either 4 or 6 Retro-Pro BLE sensors to give you flexibility to meet your specific vehicles requirements, the Hamaton Retro-Pro BLE retrofit kit also includes:

- 4 or 6 Retro-Pro BLE sensors (product number TBC).
- 4 or 6 Retro-Pro BLE TPMS valve stems (product number TBC).
- 2 rubber grommets per sensor in different sizes depending on your wheel size.
- Hook and loop band mounting option for wheels up to 26”

CROSSFIRE DUAL™ TIRE PRESSURE EQUALIZATION SYSTEM

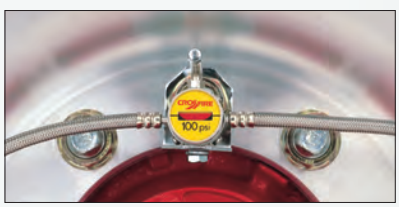

HOW CROSSFIRE WORKS: Crossfire is a pressure equalizing and monitoring valve that is mounted between dual tires. It bolts easily to the lug, hub cap, or drive axle end. Properly mounted, air freely flows from one tire to the other, maintaining equal tire pressure and load distribution.

• **Maximizes tire life** • Decreases rolling resistance for increased fuel mileage • Cuts maintenance time due to single-point inflation and the visual pressure gauge • Improves stability, braking and overall safety • Installs in minutes and requires little maintenance • Pays for itself in less than a year • **American-made and guaranteed for two years**

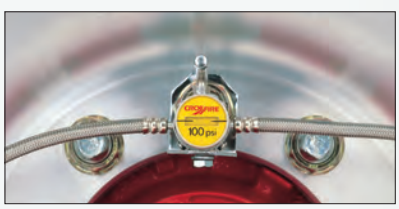

MADE IN THE USA

Under-inflation
20% under-inflation can cause a minimum 30% loss of tire life expectancy

Over-inflation
20% over-inflation can cause a minimum 10% loss of tire life expectancy

Proper-inflation
Mounted correctly, Crossfire's yellow indicator verifies that air is flowing freely from one tire to the other, equalizing the load

CF-PSI-HD	Crossfire Heavy Duty Hoses
CF-PSI-ST	Crossfire Stainless Steel Hoses

Crossfire valves are available for desired air pressures of 50 to 150 PSI in 5 PSI increments.

Example: ***CF-100-ST = Crossfire valve, 100 PSI air pressure, stainless steel hose with AT & BH brackets.***

Z-BORE VALVE SYSTEM

There are three spud types available: the standard clamp-in spud, a screw-in spud and an angle screw-in spud. There is no temporary outside-in clamp-in spud for Z-Bore. The Z-Bore Valve System is very similar to the Super Large Bore System. By using an O-Ring to seal the clamp-in spud to the rim, a greater flow diameter is created without sacrificing strength or performance. Flows 370 CFM compared to 240 CFM on the Z-Bore Valve System.

Z-1 SCREW-IN SPUD

• **The screw-in spud is used to attach any Z-Bore valves to the rim** • Designed to screw into a 1/2" NPT-tapped rim hole • Can be changed without demounting the tire

ASCOT NO.	MFG. NO.	DESCRIPTION
466-70001	Z-1	Screw-In Spud

466-70001

Z-2 CLAMP-IN SPUD

• **Can attach any Z-Bore valve to the rim through a standard valve hole (13/16")** • Fits a 13/16" diameter valve hole • Tire must be dismounted to change spud

ASCOT NO.	MFG. NO.	DESCRIPTION
466-70002	Z-2	Clamp-In Spud

Why do you need Quality Air Gauges?

Keeping an eye on tire pressure is a critical part of regular inspection and maintenance. Tire pressure is a critical function in many different ways. Underinflated (or grossly overinflated) tires don't handle safely, and if you find yourself in a "steer out of trouble" situation, improperly inflated tires can get you into a lot of trouble. Low tires heat up and can blow out, not only destroying the tire but also putting you in an accident-likely situation. Keeping tires properly inflated also makes sense from a dollars and sense perspective: Underinflated tires wear out more quickly. Overinflated tires can make the ride rough, and actually wear out suspension parts. And yes, fuel economy is really affected by tire inflation. The solution to these safety and money issues is as simple as regularly checking tire inflation, and for this you need an accurate tire pressure gauge.

CAUTION

WARNING: Never inflate a tire on a multi-piece rim (a rim made up of 2 or more separate pieces) unless the tire and rim are mounted in OSHA regulation 29-CFR Part 1910.177 or D.O.T. approved tire inflation cage. OSHA Regulations require that an inflator gauge must be equipped with a lock-on chuck and have a hose extension sufficiently long for the operator to stand clear of the possible trajectory of a multi-piece rim.

THE ADVANTAGE OF
COMPLETE AXLE-END WHEEL BALANCING

Counteract®
Tire Balancing Beads

DOUBLING TRUCK TIRE LIFE REPORTED
All rotating parts of the wheel assembly must be balanced as a single unit

For 30 years, tens of millions of complete wheel assemblies have been balanced using Counteract, and there has never been a single tire warranty issue reported.

PROVEN TO IMPROVE FUEL ECONOMY
Counteract is the only balancing product in the world proven to increase fuel economy. Counteract has demonstrated savings of at least 2.2% in two separate SAE J1321 and TMC RP-1102 Type II Fuel Tests. Don't believe us? You can download and review the tests yourself at www.cbbtests.com

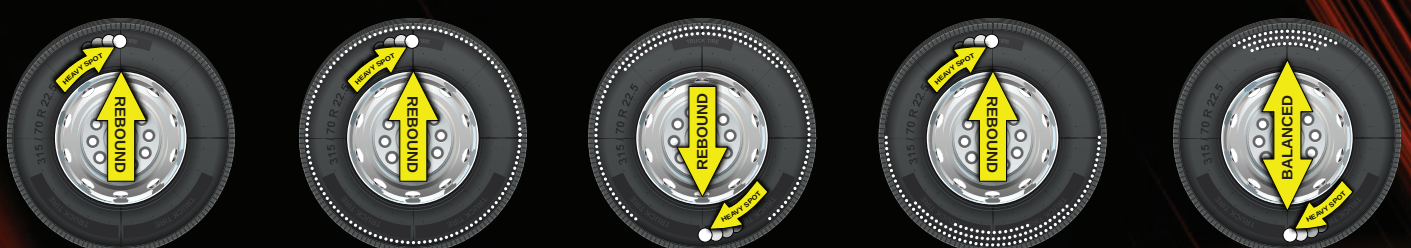

PROVEN TO EXTEND TIRE LIFE
Counteract Balancing Beads reduces rolling resistance of the tire up to 18%. This, in turn, reduces tire wear. When a tire and complete wheel assembly is properly balanced, on average, Counteract is known to increase tire life by at least 30%.

RETREADABILITY/LOWER TEMPERATURE
Counteract has proven reductions in tire operating temperature by up to 63°F. This helps eliminate thermal degradation and preserves the tire casing for retreading.

REDUCE VIBRATIONS & MECHANICAL WEAR
There is more to balance than just the tire and wheel. Counteract's unique technology will also balance everything rotating on the axle end including the brake drum and hub, while readjusting itself on the go when experiencing new and changing out of balance conditions. Something wheel weights & machine balancing cannot do.

REDUCE MAINTENANCE COSTS
Heavy vibration for extended periods of time is one of the leading causes of maintenance issues. On average it takes 10-12 minutes to balance a transport truck tire with wheel weights. Using Counteract, it only takes the time needed to mount the tire.

ENVIRONMENTALLY FRIENDLY
Counteract is manufactured from recycled tempered glass, utilizing minimal new raw materials. The beads are 99.9% glass with a special coating that allows them to repel and resist moisture. Lead weights sometimes fall off the rim while driving, damaging the surrounding environment, where counteract remains inside for the life of the tire.
